An abstract visualization of particle tracks or molecular structures. The image features a dark background with numerous colorful, glowing trails of particles in shades of red, pink, purple, yellow, and blue. These trails form complex, swirling patterns that suggest movement and interaction. The overall effect is reminiscent of a particle detector or a molecular simulation.

An abstract, colorful visualization of a molecular structure, possibly a protein or a complex of molecules, rendered in a point-cloud or particle-based style. The structure is composed of numerous small, colored spheres (pink, red, orange, yellow, purple, blue) arranged in a complex, interconnected pattern. The background is dark, making the vibrant colors of the structure stand out. The overall appearance is that of a dynamic, three-dimensional model of a biological molecule.

An abstract, colorful particle structure composed of numerous small, glowing dots in shades of red, blue, yellow, and white. The dots are arranged in a complex, interconnected pattern that resembles a molecular or crystalline structure. The background is a deep, dark blue/black, which makes the vibrant colors of the particles stand out. The overall appearance is that of a dynamic, multi-colored network of points.
